

data point exceeded range; 223,616 SA —

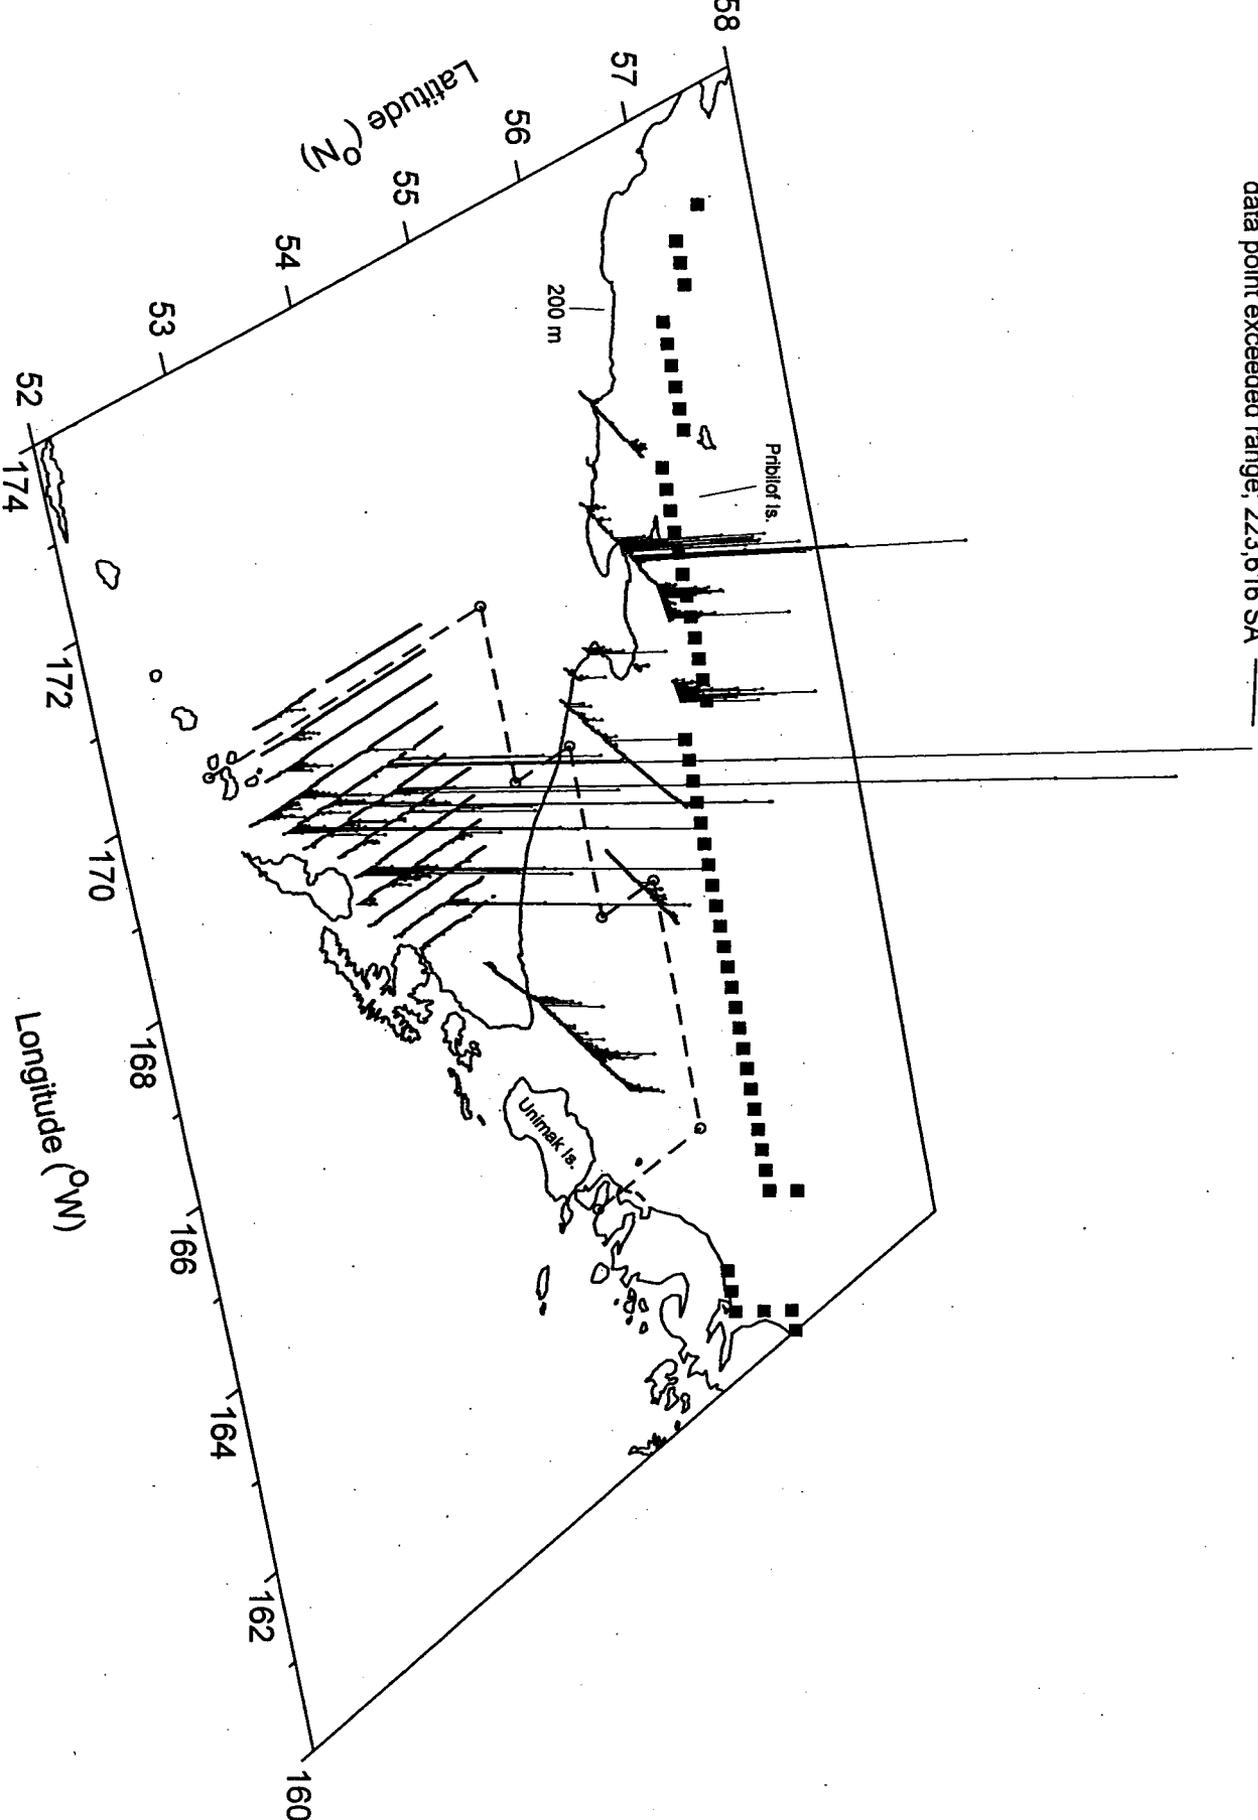

Figure 1. Pollock density (SA between surface and 0.5 m off bottom) along trackline during the winter 1991 echo integration-trawl survey of the eastern Bering Sea shelf and slope and the Bogoslof Island area. Circles and squares represent approximate sea lion "critical habitat" boundaries and ice edge extent, respectively. Z axis: 0 - 100,000.
